DORMAK

LIFETIME GARDEN EQUIPMENTS

A factory with a versatile geometry

Dormak's main production unit has an important competitive advantage, which is the diversity of tasks it handles, from cutting thick steel by laser to manual final assembly. Processes such as welding, polishing, painting and drying are steps developed, optimized and controlled internally. No key part of the machine is manufactured outdoors, with the exception of the engine, which reduces the risk of breakdown on assembly lines.

This unit, located in Vagos, Portugal, was expanded in 2022, now totaling 9000m². The plan for the coming years is even more ambitious, as a response to a growing market demand.

The positioning of Dormak's products is very clear: superior quality with thicker steel than competitor's machines, all at a fair price. "We don't make the lowest priced products", says CEO. "Our machines must be reliable, easy to use and serviceable. This is why, for example, the milling cutters of our tillers are screwed together and not welded, so that they can be repaired even after fifteen years of use. Our motivation is to create a brand where we build the machines ourselves with all our industrial know-how."

This strategy has proven to be successful in recent years, with Dormak consistently achieving annual growth above 70%. The European interest in products closer to home, with low logistical costs/better delivery times, and higher quality is increasing.

DORMAK DETAILS

Bold front with interior wheel protection

Handlebar grip in plastic

Bag lid with ergonomic handle

A large part of Dormak's lawn mower line was redesigned based on the success of the CR 43 model, with the focus being to build practical and reliable machines for areas of any size. The bag lid and handlebar grip have been modified to improve user comfort. The wheel covers, a common element in the range, is a Dormak detail already recognized in the market.

Weight	23 Kg

NEW

CR 48 & CR 55

EVOLUTION STEP BY STEP...

Dormak followed an ambitious strategy of updating a large part of its range of lawn mowers, to make available more models produces in Europe. The CR 43 project, which took several months to develop and presented sale arguments not seen in any other machine of this size, won awards for innovation and design. Therefore, it only made sense for the rest of the range to be based on the design of this revolutionary machine.

Dormak is proud to be the only lawn mower producer in the Iberian Peninsula, and wants to move a step further. With the new 48 and 55 cm steel decks, entirely manufactured in Portugal, the lawn mowers announced this year have the best design and the boldest front on the market. Thought out to the smallest detail, with the incorporation of the opinion of many professionals in the area almost all the components of the machine were improved. From the bag lid to the hand support, with the inclusion of a front bumper, there are many aspects that were revised and that excites about this new machine.

The market spoke and Dormak listened, presenting this year the result of a year of development, totally centered on the needs of the end consumer.

BASED ON SUCCESS

LAWN MOWER WITH HIGH CUTTING WIDTH

EFFECTIVE AND EASY TO USE

FOR ALL TYPES OF LAWN

THOUGHT OUT IN DETAIL

The new CR 48 and CR 55 lines are now completely made in Portugal, with the exception of the engine. With a modern steel deck designed and pressed by Dormak, all versions of these machines have a new and more accessible bag fitting system, a 360° adjustable handlebar and a new Dormak bag lid, improved to never break with heavy materials that may enter the bag. The lawn mower range now covers necessities of lawns of any size and is positioned for both leisure and professional end consumers.

SPRAYERS

A spayer or a motosprayer is a great help for agricultural and disinfestation tasks. With Dormak's wide range of products, you can address any necessity for tasks of pulverization of pesticides, herbicides, and fertilizers. With capacity for several meters of hose, it allows you to make a collective or individual application on plants, shrubs and trees as well as in vegetable gardens and vineyards.

TRANSPORTABLE

With a metal stand, wheels and handles you can move your sprayer anywhere.

VARIOUS DISTANCES

It can be equipped with a reel and various hose sizes, allowing the user to increase its range of action.

VARIOUS ENGINES

Choose your engine, between lighter and stronger powers, so you can adapt to the necessity of your work.

DORMAK DETAILS

Reel for 50 meters of hose

Large wheels adapted to capacity

Wide deposit entrance

Dormak motosprayers have one of the most attractive designs on the market and are equipped with a high quality reel and hose, where every component is made in Europe. The models are all extremely balanced, thanks to the system of 1 or 2 wheels depending on their capacity.

SPRAYERS

45 liters

RIDERS

DORMAK™

Dormak's riders promise a unique experience with the new range of lawn tractors. Built and designed from scratch, they feature top of the range transmission and enough power to tackle any type of terrain, whether low or tall grass.

SAFE

Presence of elements such as a superior protection ring against accidents to make the user comfortable and confident.

DESIGN

Based on the best references on the market, the design was thought to reflect the Dormak brand and present the most beautiful and comfortable tractor to handle.

ROBUST

The build quality is present in every detail of the machine, with a reinforced chassis for long term durability.

DORMAK DETAILS

Innovative cutting system for greater efficiency

Pedal and handbrake system

Protective frame with hinge

Dormak riders are designed with a pioneering cutting system, crash protection rim and pneumatic wheels to tackle any surface. The front and rear bumpers help both to lower tall grass for cutting and to protect in adverse situations. They have a pedal system instead of a lever in the bigger model for greater comfort, with variable forward and reverse speeds.

MADE IN EUROPE

EVOLUTION STEP BY STEP...

In 2021, Dormak decided to start producing Riders, a pioneering project in Portugal, which involved a major I&D effort for over a year.

Following an ever-increasing need for riders, Dormak is increasing its offer in more professional segments for the treatment of larger areas.

The engines offered guarantee more than enough power from easy surfaces to the most demanding ones.

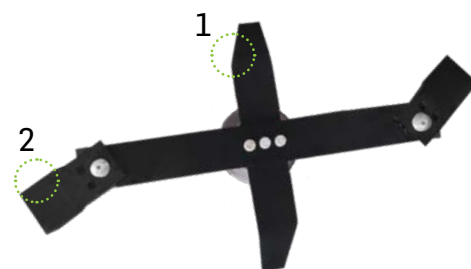

The machines have been tested over many months and fine-tuned according to the user's efficiency and comfort.

It has the innovative **Dormak Cutting System**, a transmission of the highest performance, pedal or lever for acceleration depending on the model, brake system, among other details that promise to surprise you.

DORMAK CUTTING SYSTEM (DCS)

An innovative blade system developed by Dormak based on its know-how and best market practices. The **Dormak Cutting System** is composed by:

- 1) a mulching blade
- 2) a blade with loose ends, flexible to absorb impact from stones and other hard materials without any difficulty. Makes cutting significantly more effective.
